VIOlight encompasses a range of toothbrush storage containers that use a germicidal UV bulb to kill germs when the toothbrush is not in use. A blue ribbon glow lets you know the sanitiser is working. The entire process takes minutes and the bulb automatically shuts off when the cycle is complete, destroying 99.9% of bacteria, including the H1N1 Swine Flu virus.

A great practice builder, these items will brighten up the front counter whilst adding value to your business. Supported by an extensive public awareness and marketing campaign, everyone will soon be talking about VIOlight.

MODEL VIO100

Model VIO100 features a 100% germicidal UV bulb and a blue ribbon glow indicator. It is compact and easy to use, making it ideal for busy practices.

MODEL VIO200

Model VIO200 features a 100% germicidal UV bulb and a blue ribbon glow indicator. It is compact and easy to use, making it ideal for busy practices.

MODEL VIO300

Model VIO300 features a 100% germicidal UV bulb and a blue ribbon glow indicator. It is compact and easy to use, making it ideal for busy practices.

MODEL VIO400

Model VIO400 features a 100% germicidal UV bulb and a blue ribbon glow indicator. It is compact and easy to use, making it ideal for busy practices.

MODEL VIO500

Model VIO500 features a 100% germicidal UV bulb and a blue ribbon glow indicator. It is compact and easy to use, making it ideal for busy practices.

MODEL VIO600

Model VIO600 features a 100% germicidal UV bulb and a blue ribbon glow indicator. It is compact and easy to use, making it ideal for busy practices.

MODEL VIO700

Model VIO700 features a 100% germicidal UV bulb and a blue ribbon glow indicator. It is compact and easy to use, making it ideal for busy practices.

MODEL VIO800

Model VIO800 features a 100% germicidal UV bulb and a blue ribbon glow indicator. It is compact and easy to use, making it ideal for busy practices.

About ID Health

ID Health has evolved from Inter Dental which was established in 2003 to introduce the revolutionary BITEC Mini Dental Implants to Australia and New Zealand. The name change reflects our new, broader portfolio of innovative products for the wider health community. We look forward to introducing you to our range of technologically clever ideas that both you and your patients will love.

VibraJect

Reduces the pain & anxiety of dental injections

This easy to use device takes the pain out of injections by blocking the transmission of pain signals to the brain. Easily fitted to most dental syringes, VibraJect vibrates the needle without affecting your injection technique, resulting in the patient feeling the buzz but not the pain of the needle being inserted.

VibraJect is effective in reducing the discomfort of often painful palatal, mandibular block, infiltration and intraligamental injections and can also offer a great deal of emotional relief to the needle phobic and the unusually pain sensitive patient. VibraJect comes in both a standard and rechargeable battery version, and a wand attachment is available.

- Battery operated
- Fully rechargeable
- Three autoclavable clip brackets

Periotest

Periotest is a dental measuring instrument with applications for natural teeth and implants.

- Implants: assessment of the osseointegration of dental implants
- Natural teeth: diagnosis and assessment of periodontopathies, assessment of the occlusal load and quantitative feedback of treatment initiatives

The device has a non-invasive, tapping head which records duration of contact with the tooth, implant or abutment. The resultant reading gives you an objective measure of osseointegration or of an implant or degree of clinical loosening of a natural tooth.

Suitable for use with all implant systems, Periotest can help to determine if an implant is ready to load. When used at routine follow-up appointments, Periotest may also offer an early indication of potential implant failure.

- Quick and easy to use
- Process takes approximately 4 seconds
- Wireless, rechargeable unit

The Periotest scale ranges from -8 to +50. The lower the Periotest value, the higher the stability / damping effect of the test object (tooth or implant).

Assessment of the osseointegration of dental implants

Periotest Value Range	Interpretation
-8 to 0	
+1 to +9	Good osseointegration the implant is well integrated and pressure can be applied to it
+10 to +29	A clinical examination is required; the application of pressure on the implant is generally not (yet) possible
+30 to +50	Osseointegration is insufficient and no pressure may be allowed to act on the implant

Diagnosis and assessment of periodontopathies

Clinical degree of loosening	Periotest value
0	-08 to +09
I	+10 to +19
II	+20 to +29
III	+30 to +50

HelioLight

Put your light on

A portable, affordable way to light up any dental instrument and achieve direct, shadow free illumination in the oral cavity.

Five levels of brightness, with sterile, disposable light probes.

Cordless, rechargeable unit with over 15 hours use before charging required.

Perfect for implants, scaling, extractions and tooth root removal - any where you need light.

Hygitech

Exceptional quality sterile goods available in two complete kits suitable for implant surgery

- Highest European quality, with a sensible local price
- More cost effective than purchasing items individually
- Never run out of an item
